In re PULLELA ET AL., Application No. 10/625,063  
Amendment B

Claim 17 (previously presented): The computer-readable medium of claim 12, wherein said performing the lookup based on the flow includes:

performing a first lookup operation on a first set of associative memory entries based on the flow identification value to generate an associative memory result; and

performing a second lookup operation in an adjunct memory based on the associative memory result to identify the flow identification value mask.

Claim 18 (canceled)

Claim 19 (canceled)

Claim 20 (previously presented): An apparatus for processing packets, the method comprising:

means for identifying a packet;

means for identifying a flow identification value based on the packet;

means for performing a lookup based on the flow identification value to identify a flow identification value mask; and

means for masking the flow identification value with the flow identification value mask to generate a masked flow identification value.

Claim 21 (previously presented): The apparatus of claim 20, comprising means for updating a data structure based on the masked flow identification value.

Claim 22 (previously presented): The apparatus of claim 20, wherein the flow identification value includes at least two items of the list consisting of source address, destination address, source port, destination port, and protocol type.

In re PULLELA ET AL., Application No. 10/625,063  
Amendment B

Claim 23 (previously presented): The apparatus of claim 20, wherein the flow identification value includes a transport layer, session layer, presentation layer or application layer value.

Claim 24 (previously presented): The apparatus of claim 20, wherein said means for performing the lookup based on the flow identification value includes means for performing a lookup operation in an access control list.

Claim 25 (previously presented): The apparatus of claim 20, wherein said means for performing the lookup based on the flow identification value includes:

means for performing a first lookup operation on a first set of associative memory entries based on the flow identification value to generate an associative memory result; and  
means for performing a second lookup operation in an adjunct memory based on the associative memory result to identify the flow identification value mask.

Claim 26 (new): The apparatus of claim 20, including: means for processing the packet based on the masked flow identification value.

Claim 27 (new): The method of claim 20, comprising: processing the packet based on said generated masked flow identification value.

Claim 28 (new): The apparatus of claim 20, wherein the packet processing engine is configured to process the packet based on the masked flow identification value.

Claim 29 (new): The method of claim 13, wherein said steps include: processing the packet based on said generated masked flow identification value.
